# Task 4

Write a program which reads a natural number n and displays in one graphical box

all its nontrivial divisors (i.e., from the interval $[2, n-1]$). If there are no nontrivial divisors, the message should state that the number is prime.

Deadline: Nov 25 (inclusive)

Put yout Java file(s), and only Java files, in a directory the name of which is your surname (without Polish or any other non-ASCII characters). Names of Java files are arbitrary, although of course they should correspond to names of classes you created. Zip the whole directory ("from above" — not just the files inside it). Then drop the zip file created in this way into folder "Tasks / Task_XX" of the GAKKO system (where 'XX' is the task number).
